Sugarcane By-products The New Eco Alternative

Though the "Elyse eco range" predominately consists of recycled pulp material with a high environmental value, consideration have been given to market demand for a virgin quality product incorporating new technology that has recently opened the gates for an eco friendly solution to provide a virgin quality product without any diverse effects on the environment.

The Material

Sugarcane by-products mixed with small portions of bamboo & wood pulp have produced a whole new product concept in virgin pulp quality. By-products are the "bagasse" (waste) of sugarcane after the sugarcane has been processed for the manufacture of sugar.

The Process

The Packaging

The packaging and inner wrappers have been manufactured from sugarcane "bagasse" (waste) or 100% recycled material ensuring that all objectives have been met in keeping up with our environmental commitment.

Product Specification

- Processed from sugarcane by-product, bamboo & wood pulp for binding
- GSM and binding pulp mix varies from product to product
- Made from variable percentages of sugarcane by-product & virgin pulps
- Pulp mix variables are noted on each individual product specifications
- No bleaching dyes or additives added in the manufacture of these products.

Assess The Eco Benefits

- Sugarcane by-products are biodegradable & compostable
- The growth cycle is less than one year to mature
- Produces a quality virgin fibre product
- Contributes towards the preservation of our forests
- Helps reduce carbon emissions
